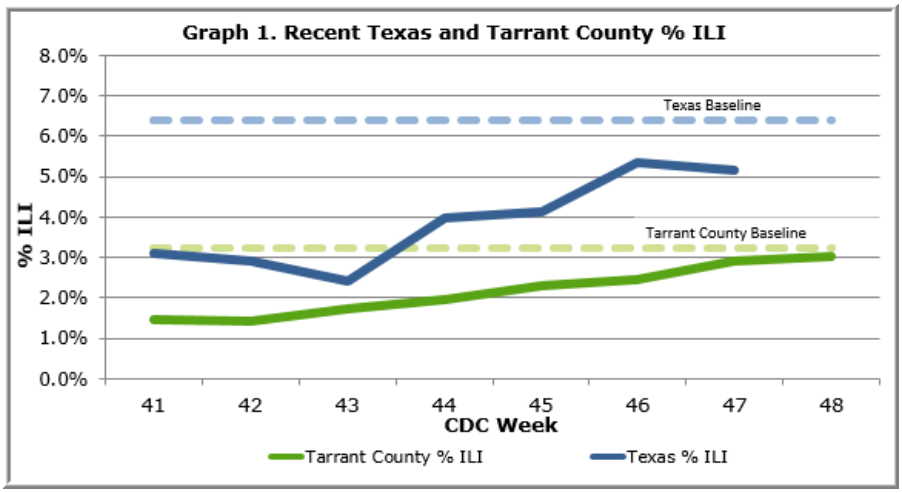
Tarrant County Influenza Surveillance Weekly Report
CDC Week 48: Nov 26-Dec 2, 2017

Influenza Activity Code: County and State Levels

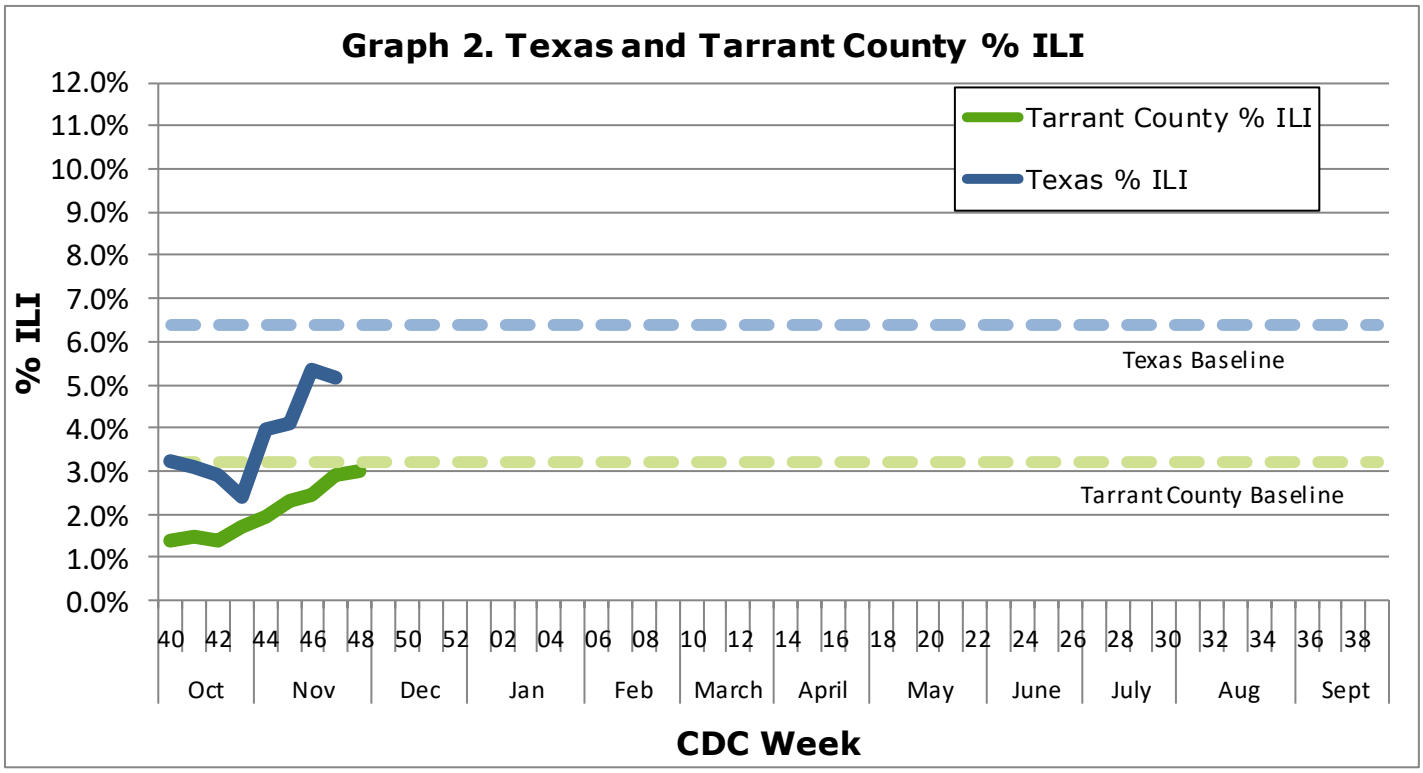
Tarrant County: Week 48
Local
Tarrant County: Week 47
Sporadic
Texas: Week 47
Local

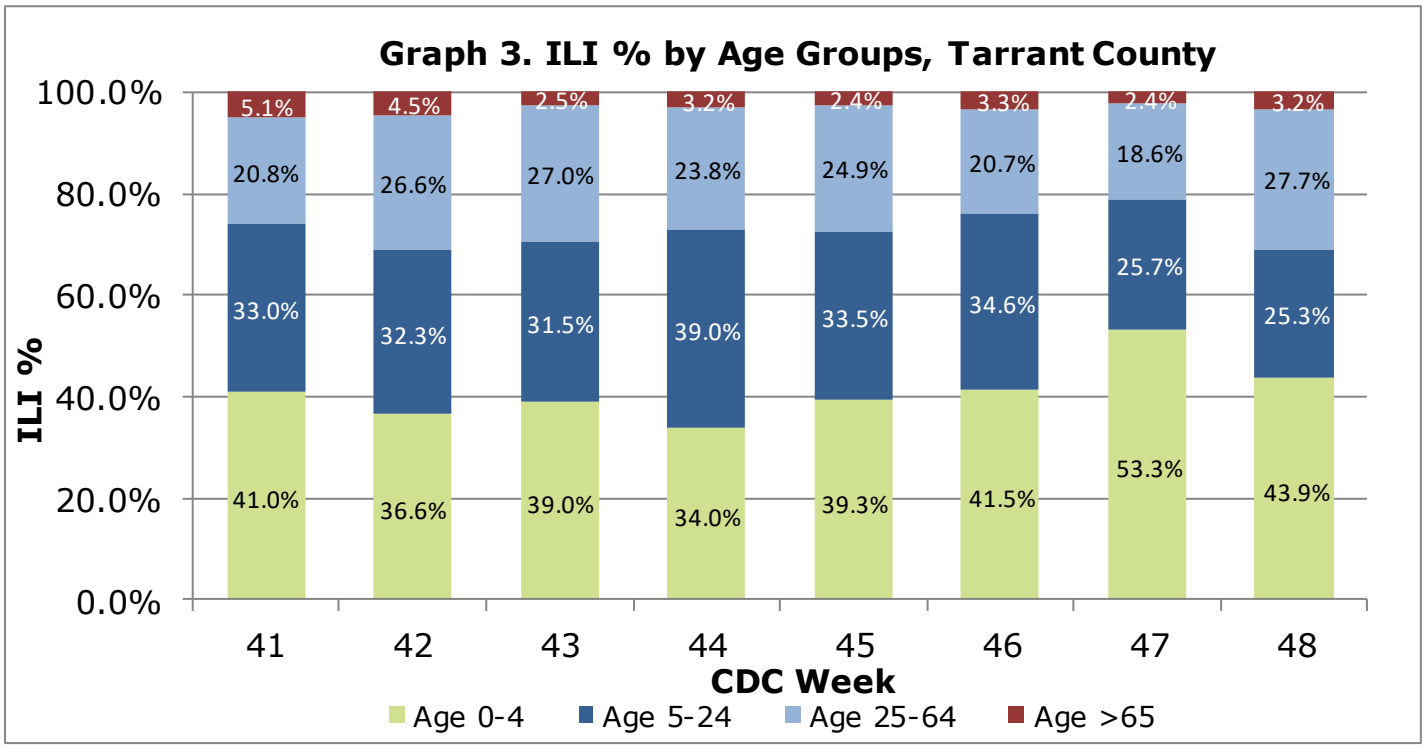


Respiratory Virus Activity Summary

- The percentage of reported influenza-like illness (ILI) in Tarrant County increased from 2.9% in week 47 to 3.0% in week 48 and is currently below the 2017-2018 Tarrant County baseline (3.2%).
- The percentage of all cause school absenteeism was 4.7% during week 48 in Tarrant County. Absenteeism due to ILI and school nurse office visits due to ILI were 2.1% and 2.5% respectively during week 48 in Tarrant County.
- The percentage of rapid flu test positives in Tarrant County remained at 9.3% in week 47 and week 48.
- Based on data from 12 voluntarily reporting hospitals, the percentage of reported ICU admissions due to influenza in Tarrant County was 0.6% in week 48.
- During the 2017-2018 influenza season, 0 Tarrant County influenza-associated pediatric deaths have been reported. As of week 47, 1 influenza-associated pediatric death has been reported in Texas, with a total of 5 reported nationwide for the 2017-2018 season.
- During the 2017-2018 influenza season, 1 influenza outbreak has been reported in a Tarrant County school.
- Since last report, 7 surveillance specimens were tested by The North Texas Regional Laboratory. The following types and number of viruses were detected in these specimens: Influenza A/H1 (1), Influenza A/H3 (1), and RSV (1). Cumulatively this season, the North Texas Regional Laboratory at Tarrant County Public Health has tested 50 surveillance specimens and of these, 13 have been positive for influenza.
- In Texas during week 47, the proportion of outpatient visits for ILI, 5.2%, was below the state baseline of 6.4%.
- Nationally during week 47, 7.2% of specimens tested and reported to the CDC were positive for influenza. The proportion of outpatient visits for ILI (2.3%) was above the national baseline (2.2%). The proportion of deaths in week 45 attributed to pneumonia and influenza from the National Center for Health Statistics (5.7%) was below the epidemic threshold (6.5%).

Influenza Like Illness (ILI): Local and State Levels

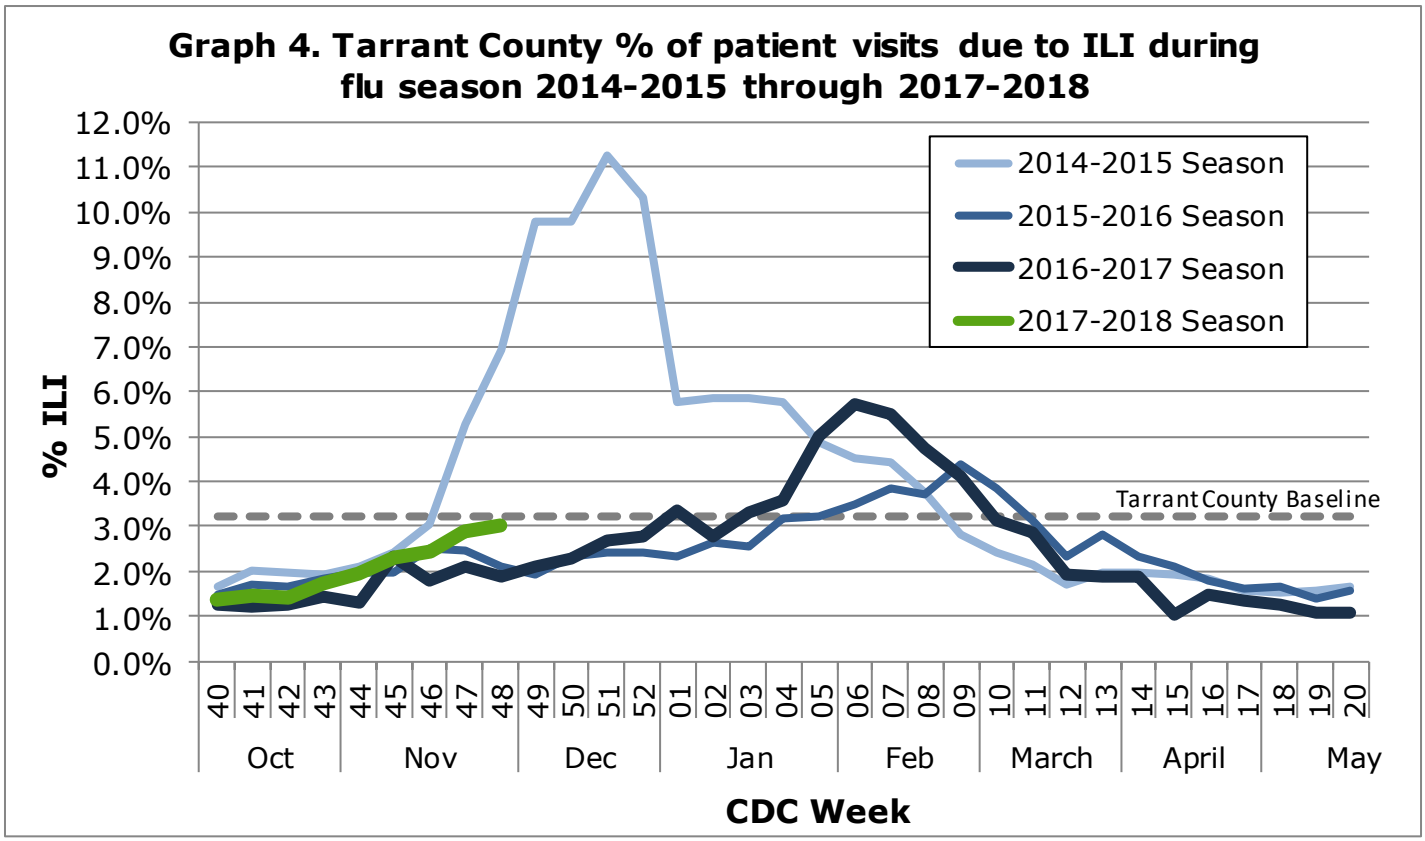




In week 48, 3.0% of visits to health care providers were due to ILI. ILI levels are currently below the county established baseline of 3.2% and are lower than the state of Texas levels. In Tarrant County, of the 499 reported patients presenting with ILI during week 48, the largest percentage of the reported ILI patients, 43.9%, was in the 0-4 age group.

NOTE: Tarrant County ILI activity is assessed using information provided by surveillance participants and the Electronic Surveillance System for the Early Notification of Community-based Epidemics (ESSENCE). For week 48, 27 surveillance participants - 13 Hospitals, 10 Clinics, 3 Colleges/ Universities, and 1 Business—reported ILI information to Tarrant County Public Health. Texas ILI activity is assessed using information provided by a network of providers . For week 47, 104 providers reported information to the Texas Department of State Health Services.

Tarrant County Historical ILI and ESSENCE Geographical Distribution Map

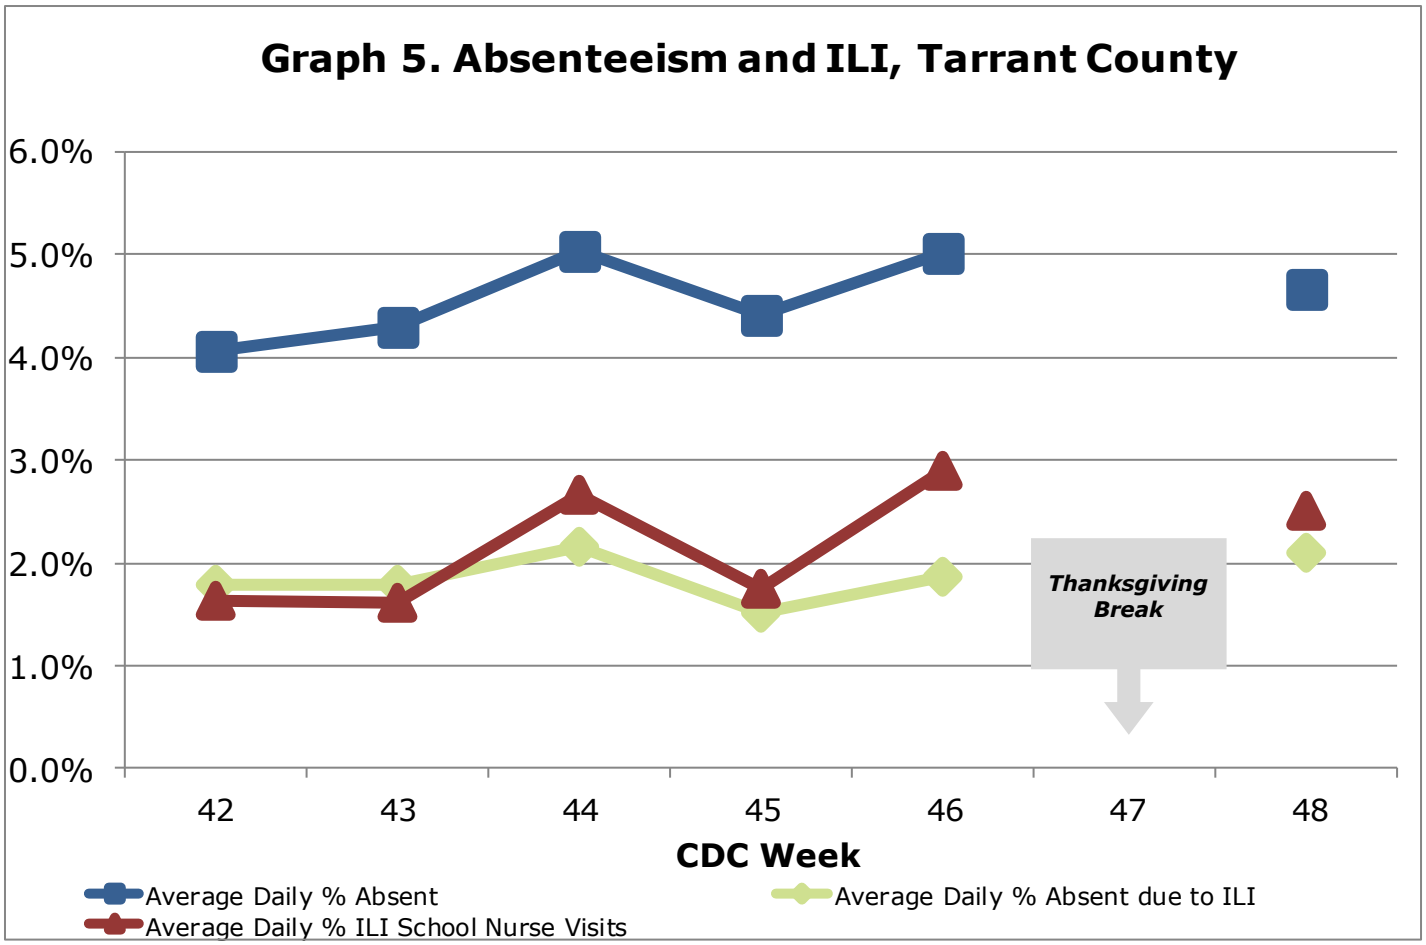


Map 1. Tarrant County ER ILI Rates per 100,000 Population by Zip Code, Week 48

Map not available this week due to issues with data availability in ESSENCE for week 48.

Zip codes with ≤5 cases are assigned 0. Tarrant County ILI data by zip code is obtained from ESSENCE and includes ILI numbers from 46 hospitals that voluntarily provide data based on chief complaints of Tarrant County residents admitted to Emergency Departments in North Central Texas. Zip code population data is obtained from American Community Survey 2015 5 year estimate.

Rapid Influenza Test Results and School Absenteeism



For week 48, 9 school districts provided general absenteeism data, 8 school districts provided data regarding absenteeism due to ILI, and 8 school districts provided data regarding nurses' office visits due to ILI.

Table 1. Influenza Rapid Test Results, Tarrant County

CDC Week Number	46 (Nov 12-18)	47 (Nov 19-25)	48 (Nov 26-Dec 2)
# Influenza Tests Performed	1568	1555	1888
% Influenza Positive	9.8%	9.3%	9.3%
# Influenza A Positive	121	124	148
% Influenza A Positive	79.1%	86.1%	84.1%
# Influenza B Positive	32	20	28
% Influenza B Positive	20.9%	13.9%	15.9%
# Non-differentiated Positive	0	0	0
% Non-differentiated Positive	0%	0%	0%

NOTE: Tarrant County rapid influenza test results are reported weekly by influenza surveillance participants.
For CDC week 48, rapid influenza test results were reported by 17 hospitals, 9 clinics, and 1 college/university.

Influenza Confirmatory Test Results: Tarrant County

Table 2. North Texas Regional Laboratory: Respiratory Virus Results[1]

	Current Week	2017-2018 Season
Number of Specimens Tested	**7**	**50**
Positive Specimens	3 (42.9%)	24 (48.0%)
Influenza A	2 (66.7%)	9 (37.5%)
Influenza B	0 (0.0%)	4 (16.7%)
Respiratory Syncytial Virus	1 (33.3%)	4 (16.7%)
Adenovirus	0 (0.0%)	0 (0.0%)
Human Metapneumovirus	0 (0.0%)	0 (0.0%)
Parainfluenza-1	0 (0.0%)	2 (8.3%)
Parainfluenza-2	0 (0.0%)	0 (0.0%)
Parainfluenza-3	0 (0.0%)	0 (0.0%)
Rhinovirus	0 (0.0%)	6 (25.0%)
Inconclusive[2]	0 (0.0%)	1 (2.0%)

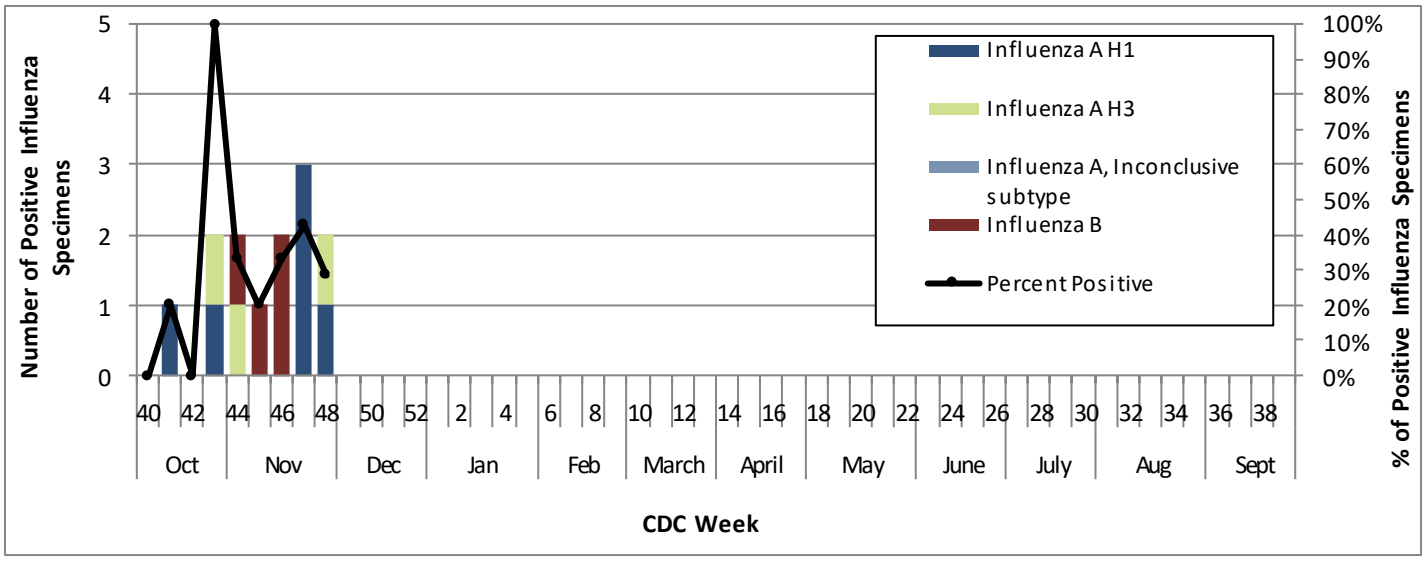
[1] Laboratory results based on real-time PCR analysis; information is for the 2017-2018 season.
2 Inconclusive for influenza A and influenza B; not included in positive specimens count.
***NOTE:** Percentages do not add up to 100% due to co-infections, 1 specimens has tested positive with a co-infection: Parainfluenza-1 and Rhinovirus*

Table 3. North Texas Regional Laboratory: Influenza Results[1]

	Current Week	2017-2018 Season
Influenza A	**2**	**9**
Influenza A H1	1 (50.0%)	6 (66.7%)
Influenza A H3	1 (50.0%)	3 (33.3%)
Influenza A, Inconclusive subtype	0 (0.0%)	0 (0.0%)
Influenza A, Unsubtypeable[2]	0 (0.0%)	0 (0.0%)
Influenza B	**0**	**4**
Influenza B Yamagata[3]	-	1 (50.0%)
Influenza B Victoria[3]	-	1 (50.0%)

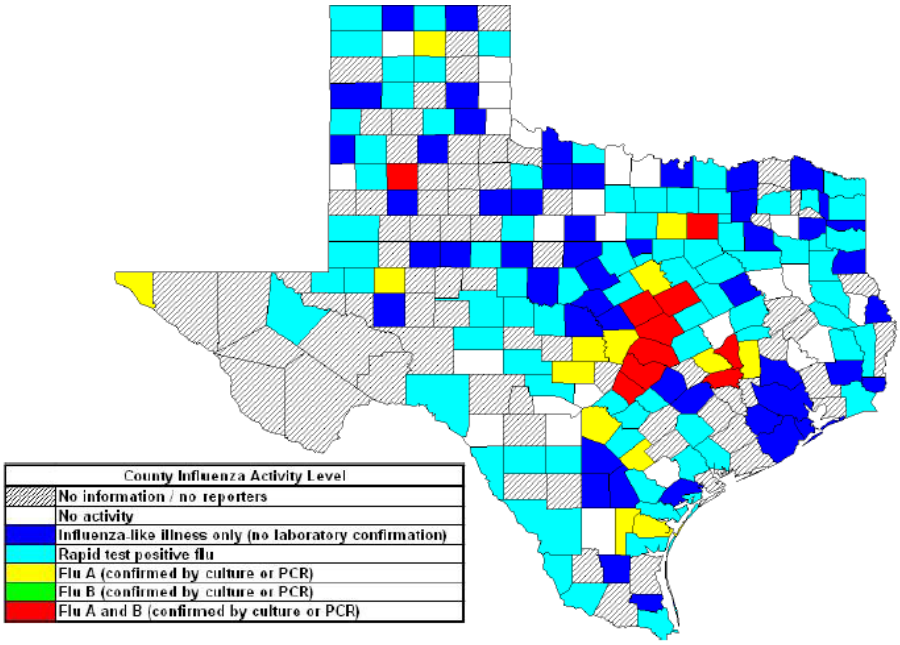
[1] Laboratory results based on real-time PCR analysis; information is for the 2017-2018 season.
[2] Influenza A subtype not determined; further analysis pending
[3] Influenza B genotyping is only included in current week column if genotyping occurred in the same week as original PCR testing.

Graph 6. North Texas Regional Laboratory: Influenza Virus Results[1]



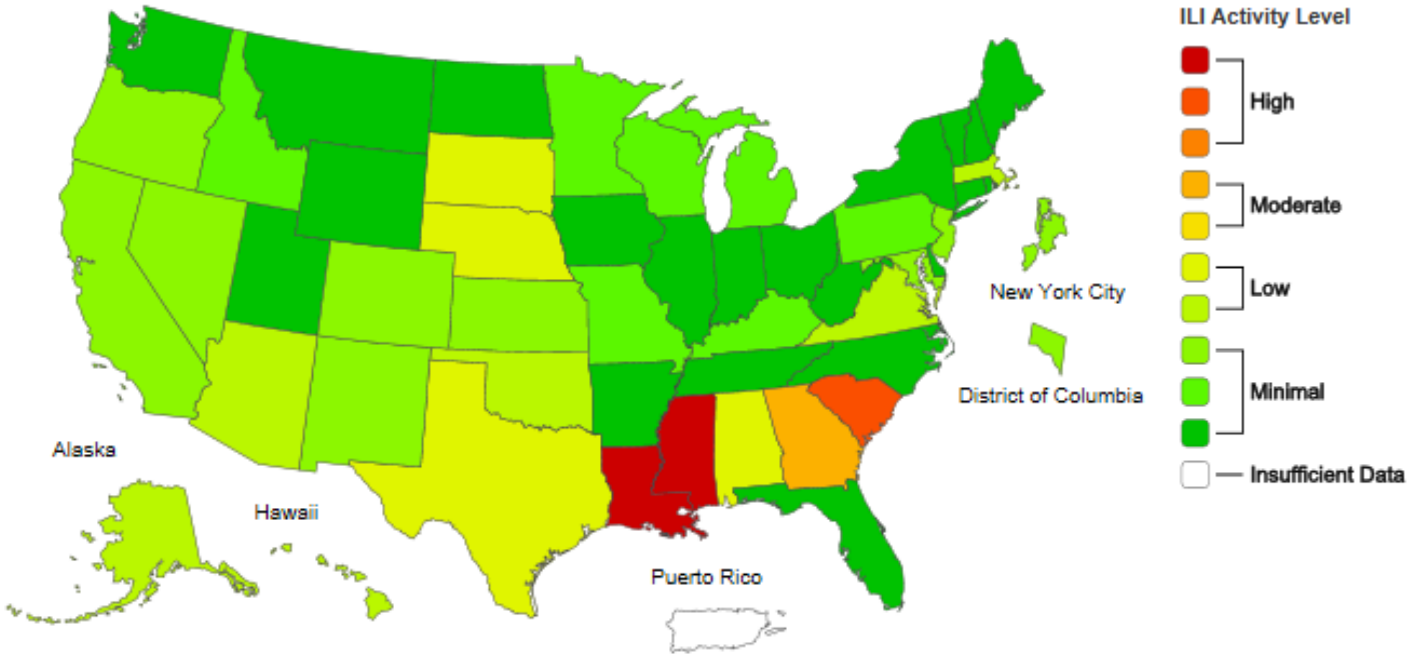
Texas and National Influenza and ILI Activity

Map 2: Texas County Specific Influenza Activity, CDC Week 47



Influenza activity level corresponds to current MMWR week only and does not reflect previous weeks' activity. The majority of influenza cases are not reportable by law to the Texas Department of State Health Services. This map contains data from sentinel sites and does not represent all influenza cases in the state. Positive laboratory results are reported according to specimen collection date or date received in the lab if the former is unknown. http://www.dshs.texas.gov/IDCU/disease/influenza/surveillance/2017---2018-Texas-Influenza-Surveillance-Activity-Report.xls

Map 3: ILINet Activity Indicator Map, CDC Week 47



Data collected in ILINet are used to produce a measure of ILI activity by state. Activity levels are based on the percent of outpatient visits in a state due to ILI and are compared to the average percent of ILI visits that occur during spring and fall weeks with little or no influenza virus circulation. This map uses the proportion of outpatient visits to health care providers for influenza-like illness to measure the ILI activity level within a state. It does not, however, measure the extent of geographic spread of flu within a state. Therefore, outbreaks occurring in a single city could cause the state to display high activity levels. Data collected in ILINet may disproportionately represent certain populations within a state, and therefore, may not accurately depict the full picture of influenza activity for the whole state. http://www.cdc.gov/flu/weekly/

Veerinder (Vinny) Taneja, MBBS; MPH
Director, Tarrant County Public Health

NOTE:

Influenza-like Illness (ILI) is defined as fever (temperature ≥ 100°F) plus a cough OR a sore throat, in the absence of a known cause other than influenza.

Tarrant County reporting quadrants consist of Northwest, Northeast, Southwest and Southeast regions within the boundaries of Interstate 35 and Interstate 30.

Tarrant County ILI baselines were determined using a method similar to the Centers for Disease Control Prevention Regional ILI baselines and Texas Department of State Health Services Texas baseline. Regional ILI baselines are determined by the Centers for Disease Control and Prevention and can be accessed at http://www.cdc.gov/flu/weekly/overview.htm

Additional information regarding Tarrant County, Texas and national ILI activity can be accessed at
