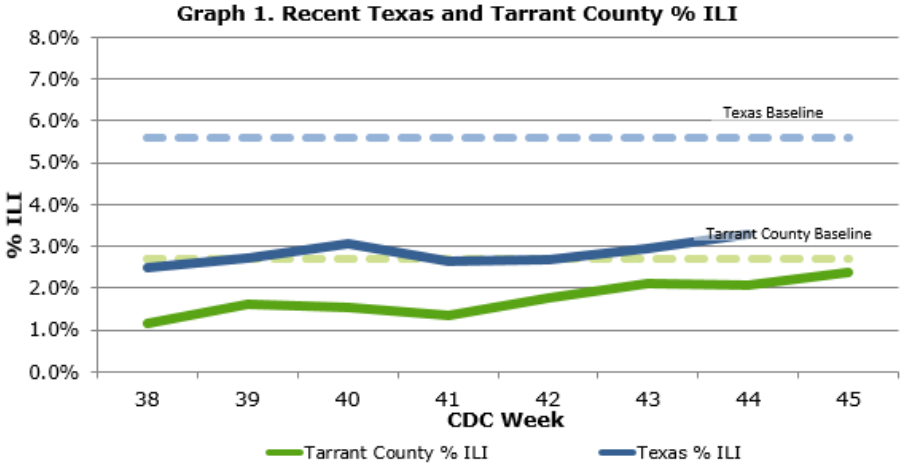
Tarrant County Influenza Surveillance Weekly Report
CDC Week 45: Nov 4-10, 2018

Influenza Activity Code:
County and State Levels

Tarrant County: Week 45
Sporadic
Tarrant County: Week 44
No Activity
Texas: Week 44
Regional

Graph 1. Recent Texas and Tarrant County % ILI

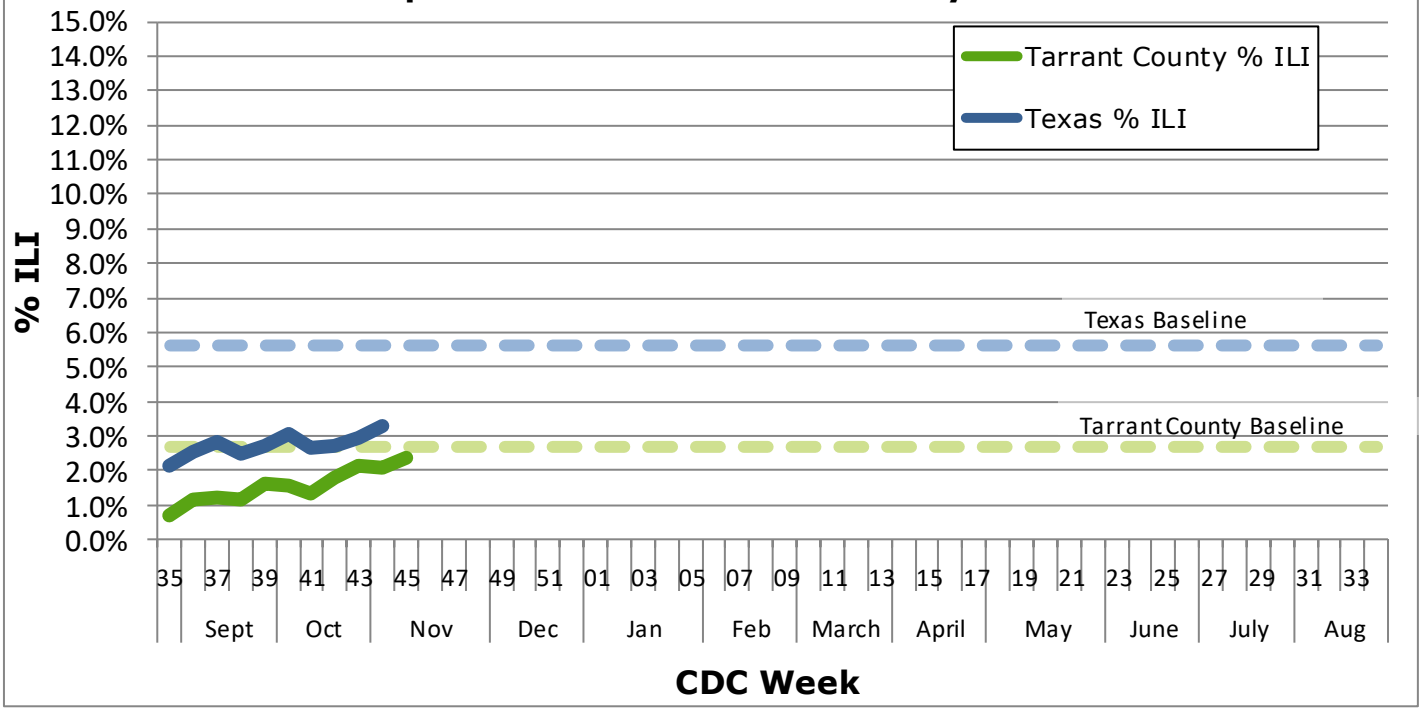


Respiratory Virus Activity Summary

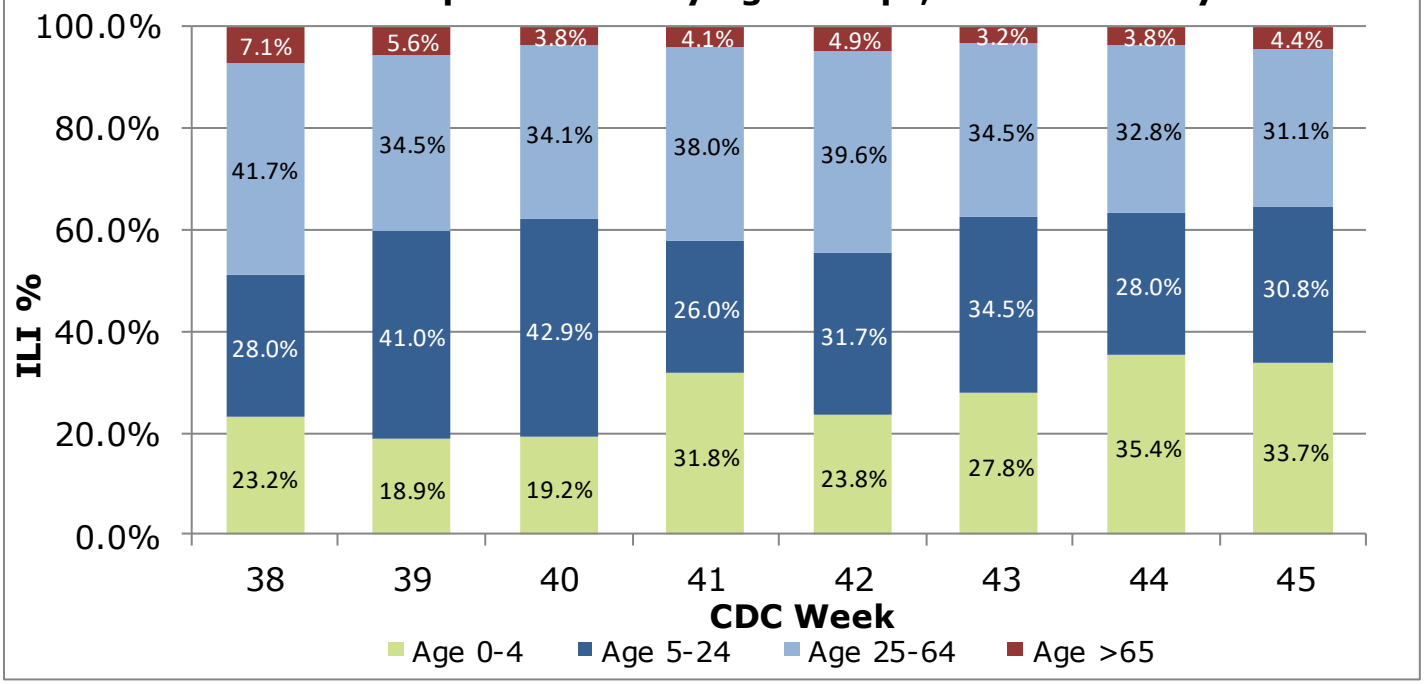
- The percentage of reported influenza-like illness (ILI) in Tarrant County increased from 2.1% in week 44 to 2.4% in week 45 and is currently below the 2017-2018 Tarrant County baseline (2.7%).
- The percentage of all cause school absenteeism was 4.7% during week 45 in Tarrant County. Absenteeism due to ILI and school nurse office visits due to ILI were 1.8% and 1.7% respectively during week 45 in Tarrant County.
- The percentage of rapid flu test positives in Tarrant County decreased from 2.2% in week 44 to 2.0% in week 45.
- During the 2018-2019 influenza season, 0 Tarrant County influenza-associated pediatric deaths have been reported. As of week 44, 1 influenza-associated pediatric deaths has been reported in Texas, with a total of 2 reported nationwide for the 2018-2019 season.
- During the 2018-2019 influenza season, 0 influenza outbreaks have been reported in Tarrant County schools and 0 localized influenza outbreak has been reported within institutions in Tarrant County.
- Since last report, 8 surveillance specimens were tested by The North Texas Regional Laboratory. The following types and number of viruses were detected in these specimens: Influenza A/H1 (1), Respiratory Syncytial Virus (2), Human Metapneumovirus (1), and Rhinovirus and Respiratory Syncytial Virus co-infection (1). Cumulatively this season, the North Texas Regional Laboratory at Tarrant County Public Health has tested 42 surveillance specimens and of these, 1 has been positive for influenza.
- In Texas during week 44, the proportion of outpatient visits for ILI, 3.3%, was below the state baseline of 5.6%.
- Nationally during week 44, 0.9% of specimens tested and reported to the CDC were positive for influenza. The proportion of outpatient visits for ILI (1.8%) was below the national baseline (2.2%). The proportion of deaths in week 43 attributed to pneumonia and influenza from the National Center for Health Statistics (5.4%) was below the epidemic threshold (6.1%).

Influenza Like Illness (ILI): Local and State Levels

Graph 2. Texas and Tarrant County % ILI



Graph 3. ILI % by Age Groups, Tarrant County

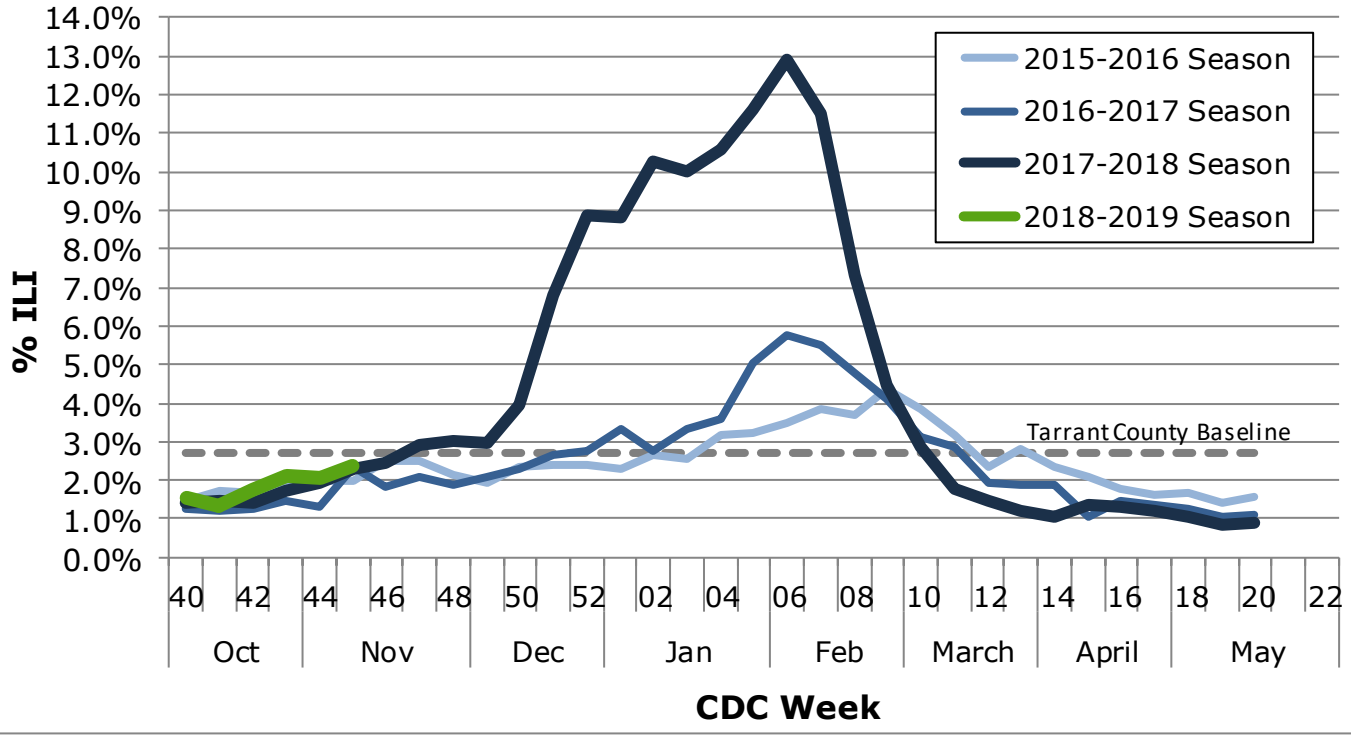


In week 45, 2.4% of visits to health care providers were due to ILI. ILI levels are currently below the county established baseline of 2.7% and are lower than the state of Texas levels. In Tarrant County, of the 543 reported patients presenting with ILI during week 45, the age group with the largest percentage of the reported ILI patients, 33.7%, was the 0-4 age group.

NOTE: Tarrant County ILI activity is assessed using information provided by surveillance participants and the Electronic Surveillance System for the Early Notification of Community-based Epidemics (ESSENCE). For week 45, 31 surveillance participants - 19 Hospitals, 8 Clinics, 3 Colleges/ Universities, and 1 Business - reported ILI information to Tarrant County Public Health. Texas ILI activity is assessed using information provided by a network of providers . For week 44, 103 providers reported information to the Texas Department of State Health Services.

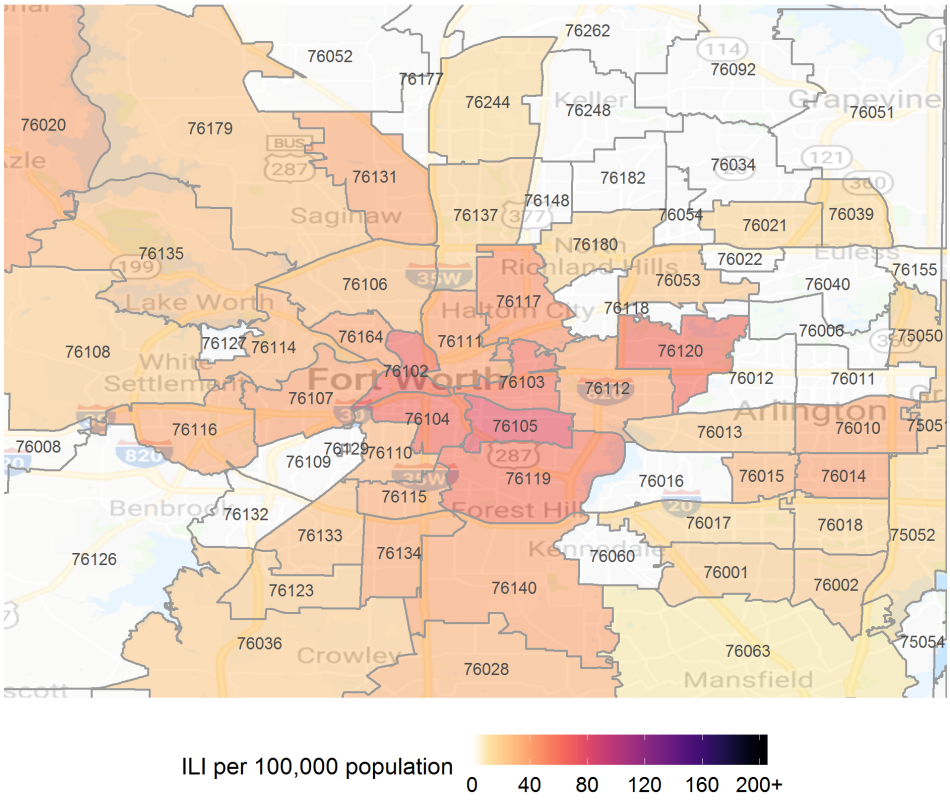
Tarrant County Historical ILI and ESSENCE Geographical Distribution Map

Graph 4. Tarrant County % of patient visits due to ILI during flu season 2015-2016 through 2018-2019



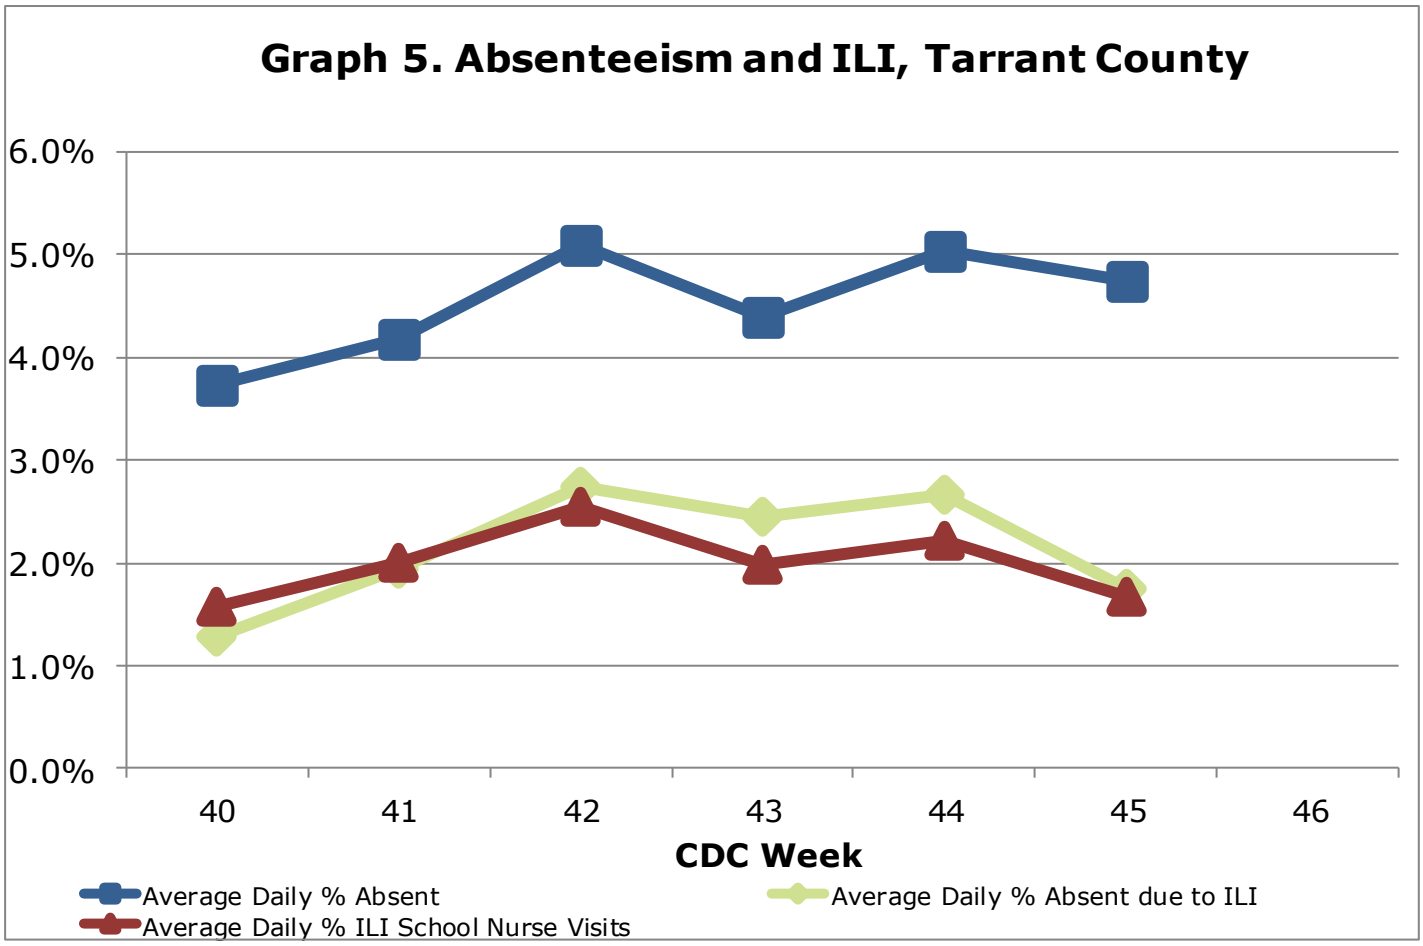
Map 1. Tarrant County ER ILI Cases by Zip Code, Week 45

Overall rate: 23.2, Maximum rate was 74 in zip code 76105



Zip codes with ≤5 cases are assigned 0. Tarrant County ILI data by zip code is obtained from ESSENCE and includes ILI numbers from 46 hospitals that voluntarily provide data based on chief complaints of Tarrant County residents admitted to Emergency Departments in North Central Texas. Zip code population data is obtained from American Community Survey 2015 5 year estimate.

Rapid Influenza Test Results and School Absenteeism



For week 45, 11 school districts provided general absenteeism data, 9 school districts provided data regarding absenteeism due to ILI, and 9 school districts provided data regarding nurses' office visits due to ILI.

Table 1. Influenza Rapid Test Results, Tarrant County

CDC Week Number	43 (Oct 21-27)	44 (Oct 28-Nov 3)	45 (Nov 4-10)
# Influenza Tests Performed	1334	1318	1455
% Influenza Positive	2.0%	2.2%	2.0%
# Influenza A Positive	12	6	12
% Influenza A Positive	44.4%	20.7%	41.4%
# Influenza B Positive	15	23	17
% Influenza B Positive	55.6%	79.3%	58.6%
# Non-differentiated Positive	0	0	0
% Non-differentiated Positive	0.0%	0.0%	0.0%

NOTE: Tarrant County rapid influenza test results are reported weekly by influenza surveillance participants.
For CDC week 45, rapid influenza test results were reported by 17 hospitals, 8 clinics, and 2 colleges/universities.

Influenza Confirmatory Test Results: Tarrant County

Table 2. North Texas Regional Laboratory: Respiratory Virus Results[1]

	Current Week	2018-2019 Season
Number of Specimens Tested	**8**	**42**
Positive Specimens	5 (62.5%)	16 (38.1%)
Influenza A	1 (20.0%)	1 (6.3%)
Influenza B	0 (0.0%)	0 (0.0%)
Respiratory Syncytial Virus	3 (60.0%)	6 (37.5%)
Adenovirus	0 (0.0%)	3 (18.8%)
Human Metapneumovirus	1 (20.0%)	1 (6.3%)
Parainfluenza-1	0 (0.0%)	0 (0.0%)
Parainfluenza-2	0 (0.0%)	0 (0.0%)
Parainfluenza-3	0 (0.0%)	0 (0.0%)
Rhinovirus	1 (20.0%)	7 (43.8%)
Inconclusive[2]	0 (0.0%)	0 (0.0%)

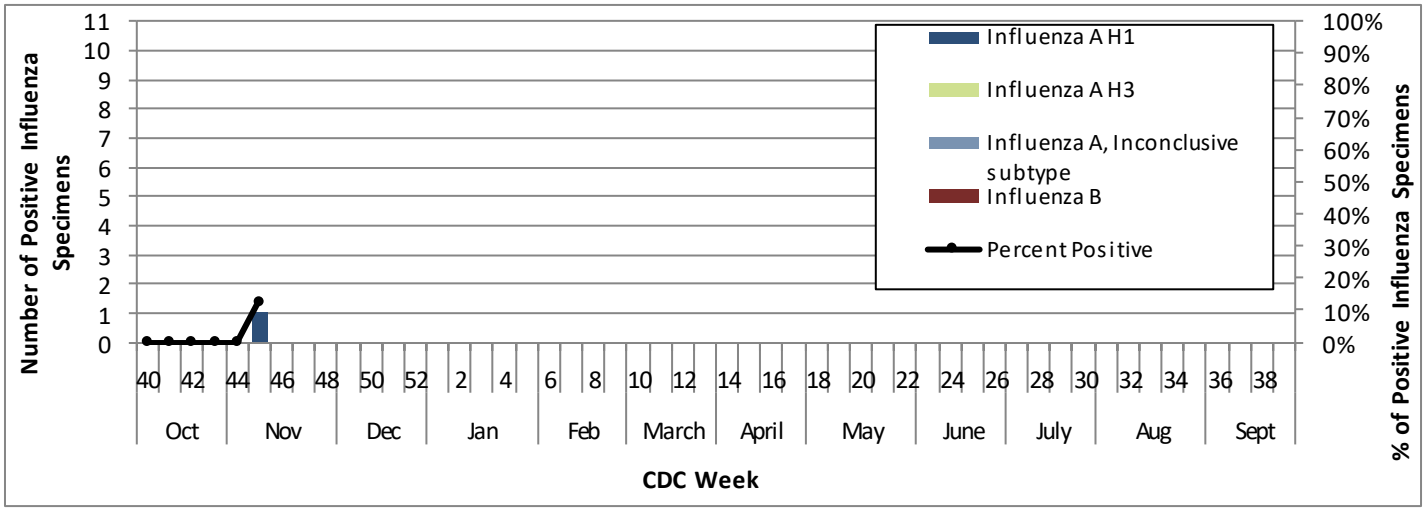
[1] *Laboratory results based on real-time PCR analysis; information is for the 2018-2019 season.*
2 *Inconclusive for influenza A and influenza B; not included in positive specimens count.*
NOTE: *Percentages do not add up to 100% due to co-infections. 1 specimen has tested positive with a coinfection: Adenovirus and Rhinovirus (1), Respiratory Syncytial Virus and Rhinovirus (1)*

Table 3. North Texas Regional Laboratory: Influenza Results[1]

	Current Week	2018-2019 Season
Influenza A	**1**	**1**
Influenza A H1	1 (100.0%)	1 (100.0%)
Influenza A H3	0 (0.0%)	0 (0.0%)
Influenza A, Inconclusive subtype	0 (0.0%)	0 (0.0%)
Influenza A, Unsubtypeable[2]	0 (0.0%)	0 (0.0%)
Influenza B	**0**	**0**
Influenza B Yamagata[3]	-	-
Influenza B Victoria[3]	-	-
Influenza B, Inconclusive	-	-

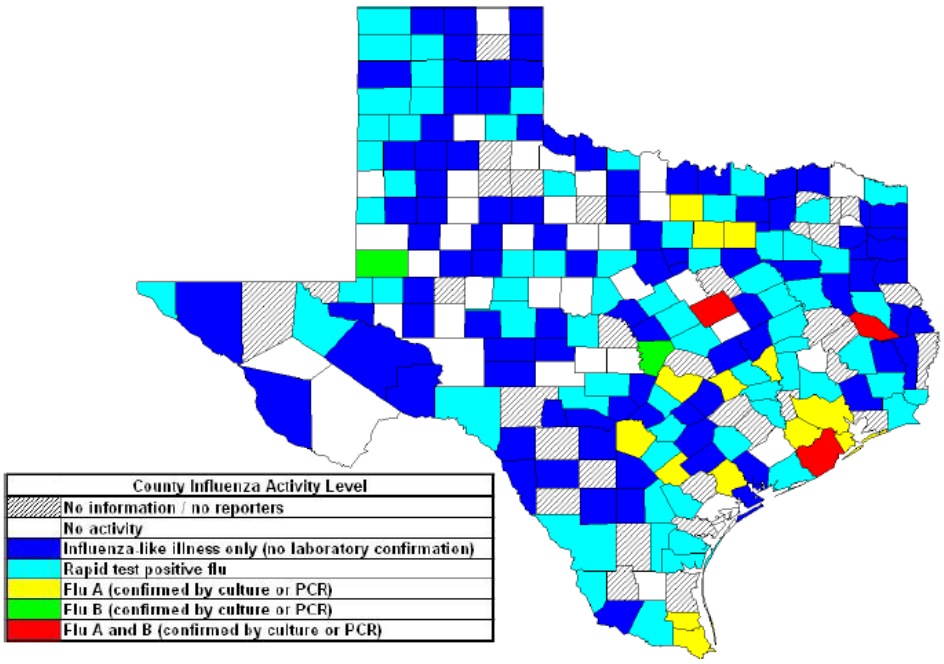
[1] *Laboratory results based on real-time PCR analysis; information is for the 2018-2019 season.*
[2] *Influenza A subtype not determined; further analysis pending*
[3] *Influenza B genotyping is only included in current week column if genotyping occurred in the same week as original PCR testing.*

Graph 6. North Texas Regional Laboratory: Influenza Virus Results[1]



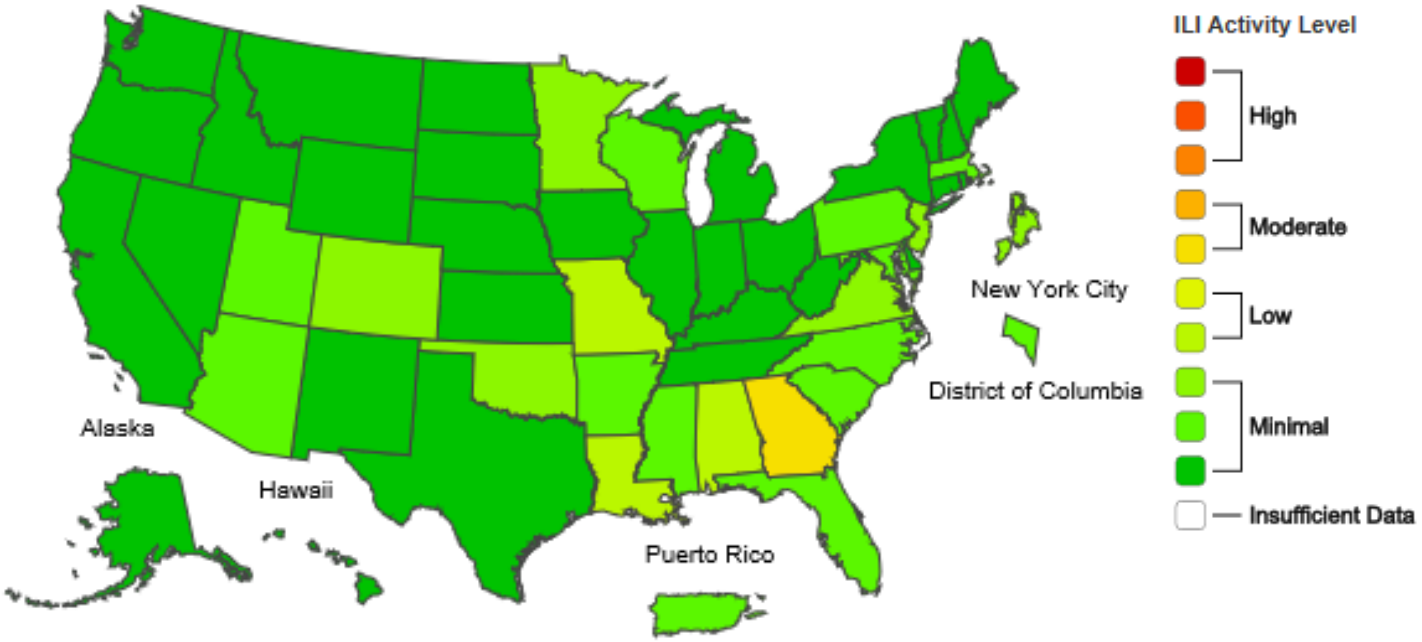
Texas and National Influenza and ILI Activity

Map 2: Texas County Specific Influenza Activity, CDC Week 44



Influenza activity level corresponds to current MMWR week only and does not reflect previous weeks' activity. The majority of influenza cases are not reportable by law to the Texas Department of State Health Services. This map contains data from sentinel sites and does not represent all influenza cases in the state. Positive laboratory results are reported according to specimen collection date or date received in the lab if the former is unknown. http://www.dshs.texas.gov/IDCU/disease/influenza/surveillance/2019.aspx

Map 3: ILINet Activity Indicator Map, CDC Week 44



Data collected in ILINet are used to produce a measure of ILI activity by state. Activity levels are based on the percent of outpatient visits in a state due to ILI and are compared to the average percent of ILI visits that occur during spring and fall weeks with little or no influenza virus circulation. This map uses the proportion of outpatient visits to health care providers for influenza-like illness to measure the ILI activity level within a state. It does not, however, measure the extent of geographic spread of flu within a state. Therefore, outbreaks occurring in a single city could cause the state to display high activity levels. Data collected in ILINet may disproportionately represent certain populations within a state, and therefore, may not accurately depict the full picture of influenza activity for the whole state. http://www.cdc.gov/flu/weekly/

Director, Tarrant County Public Health

NOTE:

Influenza-like Illness (ILI) is defined as fever (temperature ≥ 100°F) plus a cough OR a sore throat, in the absence of a known cause other than influenza.

Tarrant County reporting quadrants consist of Northwest, Northeast, Southwest and Southeast regions within the boundaries of Interstate 35 and Interstate 30.

Tarrant County ILI baselines were determined using a similar method as the Centers for Disease Control Prevention Regional ILI baselines and Texas Department of State Health Services Texas baseline. Regional ILI baselines are determined by the Centers for Disease Control and Prevention and can be accessed at http://www.cdc.gov/flu/weekly/overview.htm
