CHAPTER 1: Room Layouts and Room Data Sheet
Introduction

Purpose of Content

The purpose of this document is to provide Prototype Room Layouts and corresponding Room Data Sheets that will assist with the cost estimating portion of the Functional Planning Services for John Peter Smith (JPS) Hospital in Tarrant County. Moving forward these Prototype Room Layouts and Room Data Sheets will help inform the future design for JPS Hospital. This project is being led by Broaddus & Associates, who are the lead planners, estimators, and project managers, in partnership with Blue Cottage Consulting, healthcare facility programming experts.

Volume II | Chapter I
Patient Room, Bariatric ISO

Prototypical Room Layout (375 Square Feet)

3/16”=1’

ACTUAL SIZE: 305 S.F.
TOILET: 70 S.F.

REMARKS/NOTES:
- (3) Single outlet wall roughin location with (2) Cat6A cables
- TV outlet location with (1) Cat6A cable
- Overhead pagining speakers in adjacent area corridors
- (2) Nurse call pull cord with audio in bathroom
- (1) Nurse call patient station and (1) staff terminal requiring a 3-gang outlet roughin each
- Meets ADA standards

A Sound transmission class (STC) shall be determined by tests in accordance with methods set forth in ASTM E90 and ASTM E4 13. Where partitions do not extend to the structure above, sound transmission through ceilings and composite STC performance must be considered.

B Public space includes corridors (except patient room access corridors), lobbies, dining rooms, recreation rooms, treatment rooms, and similar space.

C Service areas include kitchens, elevators, elevator machine rooms, laundries, garages, maintenance rooms, boiler and mechanical equipment rooms, and similar spaces of high noise. Mechanical equipment located on the same floor or above patient rooms, offices, nurses stations, and similar occupied space shall be effectively isolated from the floor.

D Patient room access corridors contain composite walls with door/windows and have direct access to patient rooms. Junctions and joints of walls and partitions shall be sealed to prevent sound leakage under, over, or through the separation. Outlets shall be insulated and separated. Openings around ducts, conduits and pipes shall be sealed to minimize sound transmission.

Types of wall construction and the associated STC ratings are given in Fire Resistance Design Manual available from Gypsum Association, 810 First Street NE, #510, Washington, DC 20002.

NOTE: The listed STC rating requirements are for a reasonable degree of privacy. Rooms requiring confidentiality, such as psychiatric examination rooms and rooms with extraordinary noise sources, may require additional sound insulation including acoustical doors and seals.
