*Taken from Office of Court Administration website <http://www.courts.state.tx.us/oca/ocahome.asp>

*Clearance Rate is a measure of how effectively a court is disposing the cases added to its docket.

A Clearance Rate of 100 percent indicates that the court disposed of the same number of cases during the year as were added to the docket during the year, resulting in no changes to the court's case backlog.

[OCA Clearance Rate Description](#)

*Backlog Index is a calculation used to measure the size of the court's backlog.

It measures the pending caseload against the court's capacity to dispose of the caseload during a given time period. Specifically, it is the number of cases (of a given case type) pending at the beginning of the year. A Backlog Index of 1.0 means that the court disposed of the equivalent of the pending caseload in one year. A court should have a minimum goal of achieving a civil backlog index of 1.0 or less. On average, criminal cases should be disposed more quickly than major civil cases, so courts should maintain a lower backlog index for criminal cases than civil cases.
