

Tarrant County Public Health 17P Initiative

A program for prematurity prevention

17P Important Storage and Handling Facts

Storage: Room temperature - the vials have lots of preservative.

Packaging: Should be in amber vial, requires protection from light.

Properly prepared 17HP should be ready to use, no mixing, no filtering, etc.

Crystallization occasionally can occur. If it does, gently warming should redissolve, discard if it does not.
