† Data source: Tarrant County Medical Examiner's Office; data subject to change due to on-going investigations

§ Data source: Syndromic Surveillance (NTXSS ESSENCE 1.22) from 100+ hospitals that voluntarily provide data based on chief complaints and discharge diagnosis of Tarrant County residents admitted to emergency departments in North Central Texas

‡ Data source: National Weather Services; daily temperatures reported from the Dallas-Fort Worth International Airport

[^] Data source: AirNow.gov (Texas Commission on Environmental Quality and the EPA); daily ozone data based on the AQI and reported from the Dallas-Fort Worth International Airport; Ozone Action Days occur when the ozone category is Unhealthy for Sensitive Groups, Unhealthy, Very Unhealthy, or Hazardous. These categories are determined by the daily air quality index (AQI)

* Other HRI includes heat exposure, rash, sickness/illness, stress, and syncope; overheating; and other HRIs not listed in Figure 2

Populations at greater risk of developing heat-related illnesses:

- Households without air conditioning
- Infants and young children
- People aged 65 years or older
- People who are homeless
- People who are overweight/obese
- People who exercise/play sports outside
- People who have chronic health conditions, especially heart disease or high blood pressure
- People who take certain medications, such as for depression, insomnia, or poor circulation
- People who work outside
