Influenza Like Illness (ILI) and COVID-19 Like Illness (CLI)

COVID-19-like illness is defined as visits with a mention of Fever AND (Cough OR Shortness of Breath OR Difficulty Breathing) AND NOT (Influenza Diagnosis). These counts do not reflect confirmed diagnosis of COVID-19.

NOTE: Tarrant County ILI and CLI activity are assessed using information available from the Electronic Surveillance System for the Early Notification of Community-based Epidemics (ESSENCE). ILI and CLI visits are determined by identifying key terms and codes within the chief complaint field (i.e. the patients stated reason for visit), and diagnosis code field (i.e. ICD-9-CM and ICD-10-CM codes).

Influenza Like Illness (ILI)

Graph 4. Texas and Tarrant County % ILI

In Week 28, 3.0% of visits to health care providers were due to ILI. ILI levels are currently above the county established baseline of 2.4% and are higher than the state of Texas levels from the week prior.

Texas and National Influenza and ILI Activity

Map 1: Texas County Specific Influenza Activity, CDC Week 27

Influenza activity level corresponds to current MMWR week only and does not reflect previous weeks' activity. The majority of influenza cases are not reportable by law to the Texas Department of State Health Services. This map contains data from sentinel sites and does not represent all influenza cases in the state. Positive laboratory results are reported according to specimen collection date or date received in the lab if the former is unknown. <https://www.dshs.texas.gov/IDCU/disease/influenza/surveillance/2020-2021.aspx>

Map 2: ILINet Activity Indicator Map, CDC Week 27

Data collected in ILINet are used to produce a measure of ILI activity by state. Activity levels are based on the percent of outpatient visits in a state due to ILI and are compared to the average percent of ILI visits that occur during spring and fall weeks with little or no influenza virus circulation. This map uses the proportion of outpatient visits to health care providers for influenza-like illness to measure the ILI activity level within a state. It does not, however, measure the extent of geographic spread of flu within a state. Therefore, outbreaks occurring in a single city could cause the state to display high activity levels. Data collected in ILINet may disproportionately represent certain populations within a state, and therefore, may not accurately depict the full picture of influenza activity for the whole state. <http://www.cdc.gov/flu/weekly/>

NOTE:

Influenza-like Illness (ILI) is defined as fever (temperature $\geq 100^{\circ}\text{F}$) plus a cough OR a sore throat, in the absence of a known cause other than influenza.

Tarrant County reporting quadrants consist of Northwest, Northeast, Southwest and Southeast regions within the boundaries of Interstate 35 and Interstate 30.

Tarrant County ILI baselines were determined using a similar method as the Centers for Disease Control Prevention Regional ILI baselines and Texas Department of State Health Services Texas baseline. Regional ILI baselines are determined by the Centers for Disease Control and Prevention and can be accessed at <http://www.cdc.gov/flu/weekly/overview.htm>
